

# THE PIPELINE

June/July 2009

The Company has introduced two new multi-round vessels, the Series EG, Electronic Grade Housing and the IG, Industrial Grade Housing.

The Series EG is designed for flow rates up to 145 GPM and is ideally suited for ultraclean electronic industry applications. Manufactured from PVDF or Polypropylene materials and using the latest technology in IR/Butt Fusion welding, this unit allows the end user to achieve low extractable with filtration performance at 0.02 absolute. The Series IG is designed for higher flow rates of up to 300 GPM (1,150 Liters per minute) at constant operating pressures of 125 psi. The design and manufacturing process for this product were developed to interface with the heart of the system's filter elements. The unique sealing and alignment of the filter cartridges provide uniform flow into and around its 0.01 absolute cartridges. The unit is constructed of PVDF, CPVC and Polypropylene.

Both the EG and IG units were designed with variable length tube bundle hardware to accommodate the various filter lengths available within the market. This feature allows a mixture of multiple filter cartridges from the various third party suppliers during that critical change out period.

The Company has obtained third party certification of its newly completed clean room. The certification is to the nationally recognized ISO 14644-1 Class 10,000

standard. Our contracted clean room services include: pre-cleaning using environmentally friendly aqueous solutions and intermediate and final cleaning performed with 99.9% pure reagent grade isopropyl alcohol. Final cleanliness standards are certified by passing the last rinse alcohol solution through a Millipore patch which is then inspected under 100 magnification. Certification and packaging is in accordance with each customer's unique specification. This service is marketed under the name of Elite Precision Cleaning. Our staff has over 50 years of hands-on experience serving the needs of NASA, the Kennedy Space Center, Boeing, and both the US Air Force and Navy. Applications include components used in spacecraft, launch vehicles, medical, pharmaceutical and US Department of Energy programs. All IG and EG housing are offered with this added value option.
